I graduated from the software engineering major, have experience as a frontend developer with the react-js tech stack, typescript, css and material-ui or tailwind and other tools, for about 1 year working on several projects, namely point-of-sale websites, company profile and web quiz. Now I am open to becoming a frontend developer to contribute to a company. But I also have interest in backend developer because I don't have more experience in backend developer.

EDUCATION

Smk Satya Praja 2 Petarukan   **Pemalang, ID**
Software engineering   *2019 - 2022*

WORK EXPERIENCE

Play by Flip   **Jakarta, ID**
Frontend Developer – Internship   *March 2023 - Present*
- Solving web design problems by adding or changing component styles using css and material-ui.
- Analyze logic or code to solve 10+ bugs and implement some new features on the website using react-js and typescript.
- Collaborate and discuss with other developers or the QA team, and be able to complete approximately 75% of the tasks assigned to me.

Sinergi Mitra Technology   **Semarang, ID**
Web Developer – Intership   *March 2021 - June 2021*
- Learn basic programming starting from algorithms, web design, managing databases and implementing them with a case study
- Attend weekly online meetings with mentors and other students of approximately 16 students.
- Create a website to schedule daily activities. Here I use html and css to create it.
- Create a CRUD website to manage goods in a building shop using html, php, mysql and bootstrap. I'm using bootstrap to help speed things up in terms of web styling. The website that i made is included in the 5 best out of approximately 16 students.

Course and Certification

Eduwork.id   **2022**
Bootcamp React & Node Js
- Following the material provided, from basic to advanced, namely html, css, bootstrap, Javascript, React-js, Node or Express Js, Mysql, Mongodb as well as the Github and Git-bash version control system tools.
- Working on 8+ without revisions and uploading it to github.
- Create 1 restfull-api by setting it from 0 for point-of-sale case studies using express-js, mongdb, and other libraries such as passport js and implementing the json-web-token system. There are 7 authenticated endpoints and 1 not.
- Successfully made a website with a point-of-sale case study, to make this I used React-js, tailwindcss and axios to integrate it into the backend api that I had made.
- Deploying react-js and express-js projects to vercel.
